Reference

C library: Containers: <array> <deque> <forward list> <list> <map> <queue> <set> <stack>

<unordered_map> <unordered set> <vector>

Input/Output: Multi-threading:

<set>

multiset set

Other:

multiset multiset::multiset

nultiset::~multiset member functions: multiset::begin multiset::cbegin

multiset::cend multiset::clear multiset::count multiset::crbegin multiset::crend multiset::emplace multiset::emplace hint multiset::empty multiset::end

multiset::equal_range multiset::erase multiset::find multiset::get_allocator multiset::insert multiset::key_comp multiset::lower_bound

multiset::rbegin multiset::rend multiset::size multiset::swap multiset::upper_bound

swap (multiset)

multiset::max_size multiset::operator=

multiset::value_comp non-member overloads: relational operators (multiset) public member function

std::multiset::count

size_type count (const value_type& val) const;

Count elements with a specific key

Searches the container for elements equivalent to val and returns the number of matches.

Two elements of a multiset are considered equivalent if the container's comparison object returns false reflexively (i.e., no matter the order in which the elements are passed as arguments).

Parameters

val

Value to search for.

Member type value_type is the type of the elements in the container, defined in multiset as an alias of its first template parameter (T).

Return value

The number of elements in the container that are equivalent to \emph{val} .

Member type size_type is an unsigned integral type.

Example

```
1 // multiset::count
   #include <iostream>
#include <set>
 int main ()
     int myints[]={10,73,12,22,73,73,12};
std::multiset<int> mymultiset (myints,myints+7);
      std::cout << "73 appears " << mymultiset.count(73) << " times in mymultiset.\n";</pre>
10
11
12
      return 0:
13
```

73 appears 3 times in mymultiset.

Complexity

Logarithmic in size and linear in the number of matches.

Iterator validity

No changes.

Data races

The container is accessed.

Concurrently accessing the elements of a multiset is safe.

Exception safety

Strong guarantee: if an exception is thrown, there are no changes in the container.
